

Virtual Reality Questionnaire Toolkit: Examining Interaction Techniques for Doing Questionnaires in VR

The notable rise of a new generation of virtual reality (VR) systems in recent years opened up new methods and interventions for researchers across different areas.

It is vital for VR research and development to understand users' subjective feedback, which is usually assessed through questionnaires after leaving a VR scene.

Recent research has found that completing questionnaires directly in VR can help mitigate the break in presence (BIP).

In this final year project, the student will develop a Virtual Reality Questionnaire Toolkit (VRQT) and examine the interaction techniques for doing questionnaires in VR.
